Child and Adolescent Clinical Liaison Services	
<p>What can a Clinical Liaison do for you? Child and Adolescent Clinical Liaison Services is a grant-funded support program for children and families throughout West Virginia with mental health issues in need of services within their community. In addition, the Liaison assesses the mental health needs of children currently in DHHR custody and placed out-of-state. By conducting these clinical reviews, the Liaison is able to ensure all mental health needs are being met or if in-state placement would better suit the child's needs.</p> <p>What can a Clinical Liaison do for the community? Through a state-run Service Array Process, the Liaison determines accessibility and current capacity for a community to meet the needs of the children in that area with mental health issues. If adequate services are not provided, the Liaison works with the local Family Resource Centers to develop needed services, promote community awareness, and provide training and education for mental health professionals.</p> <p>School Based Behavioral Health What is School-Based Behavioral Health? This program is designed to give students the opportunity to speak with a behavioral health professional in the familiarity of their school environment through group and individual meetings during the school-day. As part of the meetings, students will participate in various activities and discussions in order to identify emotional disturbances and challenging behaviors that interfere with their social, emotional, and academic development. With group and individual therapy, children will be able to recognize different thoughts and feelings and how they influence their behaviors and learn to express themselves appropriately.</p>
