<p><b>Level III</b> Burlington's Beckley Campus, located in Beckley, WV, has two Level III cottages, that serves 10 boys and 10 girls ages 11 to 17.</p> <p>Burlington utilizes a holistic team approach to treatment that promotes the mental and spiritual wellness. Behavioral stability is required for successful community reintegration. Individual programming is based on identification of each youth's strengths and needs. The treatment teams assess each resident to evaluate, plan, develop, and implement care. Treatment includes individual, family and/or group therapy, behavioral management, recreation, experiential learning programs, psychiatric and general medical services.</p> <p><i>Level III</i> services provide a highly structured and intensively staffed (1:3) 24-hour setting that targets youth with DSM-V diagnosis such as severe conduct and emotional disorders. As a result, these youth are unable to function in multiple areas of their lives (home, school, community). It provides a highly structured program with formalized behavioral programs and interventions designed to create a therapeutic environment. All activities and interventions applied are utilized with the goal of stabilizing the child's serious mental condition. The focus of intervention is on psycho-social rehabilitation aimed at returning the child to an adequate level of functioning. Depending on the educational assessment youth may be enrolled in the on-campus school or public school. The goals of intermediate residential treatment programs are to develop and improve social and coping skills to increase the likelihood of success once the child has returned to a less restrictive level of care.</p>
