<p><b>Level III</b> Burlington's Level III Program, Brenda's House, located in Old Fields WV, serves males and females ages 5 –10.</p> <p>Burlington utilizes a holistic team approach to treatment that promotes the mental and spiritual wellness and behavioral stability required for successful community reintegration. Individual programming is based on identification of each child's strengths and challenges, modification and redirection of interfering behaviors and generalization of targeted behaviors. The treatment teams assess the resident, plan, implement, and evaluate care. Treatment includes individual and group therapy, behavioral management, recreation, experiential learning programs, and psychiatric and general medical services.</p> <p><i>Level III</i> services provide a highly structured and intensively staffed (1:3) 24-hour setting that targets youth with DSM-V diagnosis such as severe conduct and emotional disorders. As a result, these children are unable to function in multiple areas of their lives (home, school, community). It provides a highly structured program with formalized behavioral programs and interventions designed to create a therapeutic environment. All activities and interventions applied are utilized with the goal of stabilizing the child's serious mental condition. The focus of intervention is on psycho-social rehabilitation aimed at returning the child to an adequate level of functioning.</p>
